DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5, 8-11, 13-16, 19 and 21 are rejected under 35 U.S.C. 102(b) as being anticipated by Shuler (3,975,995). See 24 for the blower, 30 for the plenum and 48 for the air diffuser. Regarding claims 2, 13-15 and 19, see fig. 1 and the brackets on wall 14. Regarding claims 5 and 16, see 32.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Regarding claims 12 and 20, Shuler discloses all of the limitations of the claims except for the range of airflow holes being between 0.125" and 0.5". However, since the applicant has failed to establish any criticality or synergistic results which are derived from the recited configurations, these limitations are considered a matter of obvious design choice. Thus, the applicant's design configurations would have been an obvious improvement to one of ordinary skill in the art with regard to the apparatus disclosed in Shuler.

Regarding claim 4, there is insufficient structure claimed to support the recited functional language "...air diffuser is capable of eliminating initial airflow turbulence ...". Regarding

Art Unit: 3749

claims 6 and 17, there is insufficient structure claimed to support the recited functional language "...cross-sectional area varies...". Regarding claims 7 and 18, there is insufficient structure claimed to support the recited functional language "...capable of dissipating static charges...".

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The provided references are representative of the state of the art that is applicable to the applicant's invention.
